EDUCATION

Livingstone College

B.S. Computer Information Systems

Expected Graduation: December 2029

GPA: 4.0/4.0

Relevant Coursework: Computer Systems, Intro to Programming, Calculus, Intro to Computer Science (Harvard CS50), Python: Machine Learning and Deep Learning (Udemy)

TECHNICAL PROJECTS

Demos | Voting Platform with Data-Layer Authorization

July 2026

demos-rust-eight.vercel.app

- Made a live web platform that lets an organization run group votes, from a simple poll to a full ranked-choice election, giving teams a durable record and a result every participant can trust.
- Defined the requirements and data model with one collaborator, then built the entire backend while he built the interface: database design, user accounts and permissions, and the vote-counting logic including round-by-round ranked-choice elimination.
- Deployed and in use. Access rules sit in the database rather than the application, so no future feature can bypass them, and an audit of my own design closed a gap that would have let participants trace votes back to individuals.
- **Technical Infrastructure:** PostgreSQL, TypeScript, Next.js, Vercel, Git, Relational Data Modeling, Schema Design, Access Control and Authorization, Authentication, API Design, Query Design

Tri-Ask-Me | AI Support Triage Agent

May 2026

<https://github.com/malgmash/Tri-Ask-Me>

- An AI assistant that reads incoming customer support tickets and decides what each one is about, how urgent it is, and which team should handle it, tested against real tickets from three different products.
- Built in Python under 24 hours as four separate stages, each handling one job. It looks up the relevant help documentation before replying, so answers come from real sources, and declines to answer when it finds nothing relevant.
- Cuts the manual effort of sorting a support queue while routing anything sensitive, such as billing, legal, security, or account access, to a person with a written reason attached. Top 10% globally out of over 15,000 participants.
- **Technical Infrastructure:** Python, Amazon Bedrock, Large Language Models, Retrieval-Augmented Generation, TF-IDF, Prompt Engineering, Classification and Routing Logic, Pipeline Architecture, Structured Output Design

Spectrum Sizzle Workshop | Baylor University, SMART Hub

June 2026

- An NSF-funded research workshop on wireless communication and spectrum policy, with 40 undergraduates selected nationwide and sessions led by engineers from Smart Hub.
- Analyzed measurements captured on professional test equipment using MATLAB, examining how signals are encoded and how limited frequency space is allocated among competing users, alongside modules on radar systems and circuit design.
- Turned raw instrument readings into conclusions I could defend against theory, and connected the engineering constraints to the regulations that decide what a company can actually build and sell.
- **Technical Infrastructure:** MATLAB, Data Analysis and Interpretation, Signal Processing, Frequency Allocation Analysis, Quantitative Modeling, Communication Systems and Modulation, Radar Systems, Spectrum Policy

COMMUNITIES & LEADERSHIP

Adobe Student Ambassador (Livingstone College)

- Selected to represent Adobe on campus, responsible for growing awareness and use of Adobe's creative tools among students across the college.
- Run peer education sessions and live product demonstrations, translating complex software into plain, step-by-step guidance for students with no technical background.
- Track where users get stuck, rework how those steps are taught, and feed the patterns back into future sessions, which has driven steady adoption and made me sharper at explaining technical work to non-technical audiences.
- **Skills Involved:** Public Speaking, Peer Education, Technical Communication, Community Building, Cross-Cultural Collaboration

ADDITIONAL SKILLS

- **Languages:** Python, C, JavaScript/TypeScript, SQL, MATLAB
- **Tools:** Codex, Claude Code, Git, GitHub, Bash, VS Code, Jupyter Notebook, Google Colab
- **Foundations:** API Design, Client-Server Architecture, Query Design, Machine Learning and Deep Learning

AWARDS & RECOGNITION

- **HackerRank Worldwide Hackathon:** Top 10% Globally out of over 15,000 participants
- **Odessa J. Robinson Scholarship:** Promise City Church
- **Lwengu School, Monze, Zambia (Jan 2019 - Nov 2021):** Class Salutatorian | Overall Best in Mathematics | Leadership Award
